

EQUINIX INFRASTRUCTURE SERVICES CABINETS, POWER STRIPS, CABLING AND MIGRATIONS

Data center designs have become more customized and complex in response to changing business requirements. Many standard data center products have a limited ability to support high-density solutions or high bandwidth. That's why the Equinix Infrastructure Services team now offers specialized products that support new equipment standards and changing technical requirements. With these new products offered by Equinix, customers gain the flexibility to adapt to future changes and the headroom to support business growth.

Equinix Infrastructure Services can make your data center deployment a turnkey process from start to finish. Spend your time worrying about your data, not your data center.

We are highly trained and dedicated engineers focused on making your data center deployment best in class. We have resale agreements with all major data center infrastructure manufacturers and highly skilled staff specializing in data center builds on standby.

- 1 Cabinet Enclosures and Racks**—Customizable height, width and depth as well as additional accessories such as cabinet doors, side panels, PDU mounting bars and integrated cable management.
- 2 Power Distribution Units**—Basic units and intelligent units available, with capabilities including switched, PIPS, POPS, integrated temperature and humidity monitoring and single IP complete system master control.
- 3 Migration Services**—Packing and shipping programs to assist with all migration needs, including “rack and stack,” pre-wire and project management.
- 4 Ladder Rack**—Gray, 12" wide standard, with options to customize width and length. Installation can be included as well.
- 5 Fiber Optic Cable Tray**—Sizes range from 2"x2" to 4"x12". Options include express exits and down spouts. Fiber tray can be mounted to cabinets, existing tray or overhead suspension infrastructure.
- 6 Distributed Copper Infrastructure**—Pre-terminated or by the reel, based on a designed cable schedule, Equinix can certify installations from CAT5 to CAT6A.
- 7 Distributed Fiber Infrastructure**—OM2, OM3, OM4, OS1, or OS2. Pre-terminated or field polished, custom connectors and materials available and determined by design.
- 8 Hot/Cold Aisle Containment**—Reduce risk by containing cold air to where it's needed most, creating consistent and predictable temperatures within your cage environment and increasing equipment lifespan through optimal operating conditions. Custom options available to meet cabinet and equipment specifications.
